

Our Smallest Device Yet!

Rediscover the special sounds of your life.

a night at the symphony

lunch with a friend

a child's whisper

Enjoy your totally invisible hearing device that adapts to all listening situations — from soft voices to social gatherings.

You needn't be the CEO of a major software company to appreciate the rapid advances in technology and its profound impact on our day-to-day lives. The same highly developed technology that delivers smart phones and digital cameras contributes to the most advanced hearing aid

developments in history. The result is improved hearing, easy adjustment and increased capabilities in instruments that are increasingly smaller in size.

Audina Hearing Instruments combines advanced engineering with exceptional craftsmanship to provide the most

advanced hearing products available today.

Our skilled professionals take a very personal interest in helping people with hearing loss and the hearing professionals who serve them.

Cue®

*Actual size
of Cue*

Our totally invisible hearing device adapts to all listening environments and allows wearers to rediscover the sounds of their lives.

Our Smallest Hearing Device Yet!

Today, smaller components deliver bigger results. Introducing **Cue®**, the smallest custom hearing instrument available with our exclusive SoftTouch™ technology. A simple, soft touch to the ear allows wearers to change memories for different listening environments.

Cue provides a discreet, custom-fit device with easy adjustments and increased capabilities in a smaller-than-ever size.

SoftTouch™ provides environmental memory changes with a gentle touch to the ear. Featured exclusively in Audina's Cue hearing instrument, SoftTouch provides the flexibility of four independent memories for different listening situations, all just a soft touch away!

Cue fits comfortably in the ear canal.

XTREME CANAL OPTION

We are proud to introduce our smallest size yet – The Xtreme Canal Option.

This new instrument size sits further recessed in the ear canal opening and is smaller than previous completely-in-the-canal (CIC) hearing aids. It combines the smallest speaker, microphone and circuit technology available in the industry, with a custom hand-built shell.

Our specialized technical team is dedicated to building a discreet custom-fit instrument utilizing vent maximizing techniques to provide clear natural sounds in a very tiny package.

The Xtreme Canal Option is available in selected custom hearing instruments in the Audina product line.

AUDINA'S XTREME CANAL OPTION THE DIGITAL ADVANTAGE

- A precise, prescriptive fitting
- Deep insertion
